

①

a)

A house-shaped subtraction grid. The roof contains the equation $= 2$. The body of the house consists of seven horizontal rows. Each row is divided into three sections: a left box for the minuend, a middle box containing a minus sign ($-$), and a right box for the subtrahend. Dotted lines are provided within each row for writing the numbers.

b)

A house-shaped subtraction grid. The roof contains the equation $= 5$. The body of the house consists of seven horizontal rows. Each row is divided into three sections: a left box for the minuend, a middle box containing a minus sign ($-$), and a right box for the subtrahend. Dotted lines are provided within each row for writing the numbers.

②

a)

A house-shaped subtraction grid. The roof contains the equation $= 7$. The body of the house consists of seven horizontal rows. Each row is divided into three sections: a left box for the minuend, a middle box containing a minus sign ($-$), and a right box for the subtrahend. Dotted lines are provided within each row for writing the numbers.

b)

A house-shaped subtraction grid. The roof contains the equation $= 11$. The body of the house consists of seven horizontal rows. Each row is divided into three sections: a left box for the minuend, a middle box containing a minus sign ($-$), and a right box for the subtrahend. Dotted lines are provided within each row for writing the numbers.
